

## Vegetables Cultivation

Mr. Moti Ram S/o Lala Ram resident of village Bandatatar teh. Barmer Dist- Barmer. He is having a family of five members- Mother, Wife and two Child .

Earlier he use to cultivate crops like Jeera, Castor, Bajra & pulses etc. Which sometimes fails due to unfavorable climate and he beared loss several times.

He was not having any sort of knowledge about Plantation of fruit plant and vegetable crop to get maximum benefits.

He was supported under BAIF – CAIRN WADI Project with 80 fruit plants, Fencing for WADI and Vegetable for Nutrition garden and was also imparted training regarding plantation and vegetable cultivation.

Today, there is 100% survival of plants in WADI and this year he cultivated vegetable of *methi* in whole area in WADI by his own investment.

He was supported with 1 kg Methi seed from project which yields 1.5 quintals and generated Rs.5250/- within 3 months only and now he has cultivated 3 kgs seeds at his own and is expected He is ensured that by vegetable cultivation he will earn extra income in short time and after two years WADI will generate a regular income. Now with this new idea Motiram is happy and hopeful and says thanks to CAIRN and BAIF.

I was completely unknown for vegetable cultivation, but now as I got it from CAIRN – BAIF Project, I found it profitable.

Earlier, income status was somehow lower which is now enhanced and cropping pattern is now changed.

In future WADI will help to Regular income.
